

TERM 3

CAREER TECHNOLOGY B8 - WEEK 5 (LESSON 1 OF 2)

Week ending: 22 May 2026	Period: 1 of 2	Subject: Career Technology
Duration: 60 mins	Strand: Designing and Making of Artefacts/Products	
Class: B8	Class Size: 42	Sub Strand: Communicating Design
Topic: Communicating design with detail		Lesson in Week: 1 of 2
Content Standard: B8/JHS2.5.1 Demonstrate knowledge and skills in communicating design.		Indicator: Use more detailed sketches and notes to communicate design ideas.
Performance Indicator: Learners can explain the importance of detailed sketches and notes in design communication and produce basic detailed sketches with appropriate annotations.		Lesson: 1 of 2
Core Competencies: Communication and Collaboration: Critical Thinking and Problem Solving: Creativity and Innovation: Digital Literacy		
References: NaCCA Career Technology Curriculum for Basic 8, pages 45-52; Design Communication Handbook for JHS		

Phase/Duration	Learners Activities	Resources
PHASE 1: STARTER 10 mins	Display two versions of the same product design on the board: one with a simple sketch and one with detailed sketches including measurements, labels, and notes. Ask learners to observe both designs and discuss in pairs which one gives more information and why. Facilitate a brief class discussion where learners share their observations about the differences between simple and detailed design communication. Introduce the lesson topic: 'Communicating design with detail' and explain that today they will learn how to use detailed sketches and notes to communicate design ideas clearly. Link to previous week's work on integrated systems review by explaining that clear communication helps others understand how to build and assemble products.	Sample product sketches (simple and detailed versions) Chalkboard/whiteboard Markers
PHASE 2: NEW LEARNING 40 mins	Explain the key elements of detailed design communication: accurate sketches, dimensions and measurements, labels and annotations, materials specification, and construction notes. Show sample products (such as a wooden stool, a simple toy, or a storage box) and demonstrate how to create detailed sketches from different views (front, side, top). Guide learners to identify what information should be included in design notes: materials needed, sizes, colours, joining methods, and special features. Demonstrate on the board how to add dimension lines, arrows, and labels to a sketch of a simple Ghanaian product like a 'chop box' or traditional stool. Organise learners into groups of six and distribute design brief cards showing simple everyday products (e.g., pencil holder, book rack, mobile phone stand). Each group selects one product and begins creating a detailed sketch with basic annotations, focusing on including at least	Sample products (wooden stool, storage box, toy) Sketch pads Pencils Rulers Design brief cards Chalkboard/whiteboard Markers

	three labels and one measurement. Move around the classroom to guide groups, asking questions like: 'What material will you use?', 'How big should this part be?', 'How will you join these parts?' Select two groups to present their initial sketches to the class, encouraging peer feedback on clarity and detail. Summarise the key features of good design communication: clarity, accuracy, sufficient detail for someone else to understand and make the product.	
	Assessment 1. Why is it important to include detailed sketches and notes when communicating a design idea? 2. Name three types of information that should be included in design notes to help someone make your product. 3. Look at this simple sketch of a pencil holder. What additional details would you add to make it clearer for someone else to build it?	
PHASE 3: REFLECTION 10 mins	Ask learners to reflect individually: 'What is one new thing you learned today about communicating design ideas?' Invite 4-5 volunteers to share their reflections with the class. Review the key learning points: detailed sketches include multiple views, measurements, labels, and notes about materials and construction. Preview the next lesson: 'In our next session, we will practise creating more complex detailed sketches with complete annotations and specifications.' Assign homework: Ask learners to observe one product at home (furniture, kitchen item, or tool) and sketch it with at least five labels showing different parts.	Chalkboard/whiteboard Learners' sketch pads

TERM 3

CAREER TECHNOLOGY B8 - WEEK 5 (LESSON 2 OF 2)

Week ending: 22 May 2026	Period: Session 2 of 2	Subject: Career Technology
Duration: 60 mins	Strand: Designing and Making of Artefacts/Products	
Class: B8	Class Size: 42	Sub Strand: Communicating Design
Topic: Communicating design with detail		Lesson in Week: 2 of 2

Content Standard: B8/JHS2.5.1 Demonstrate knowledge and skills in communicating design.	Indicator: Use more detailed sketches and notes to communicate design ideas.	Lesson: 2 of 2
Performance Indicator: Learners can produce detailed design sketches with comprehensive annotations to effectively communicate design ideas to others.	Core Competencies: Creativity and Innovation: Communication and Collaboration: Critical Thinking and Problem Solving: Digital Literacy	

References: NaCCA Career Technology Curriculum for Basic 8, Designing and Making Resource Materials, Technical Drawing Standards for JHS

Phase/Duration	Learners Activities	Resources
PHASE 1: STARTER 10 mins	Display two design sketches on the board: one with minimal detail and one with comprehensive annotations and detailed views. Ask learners to compare the two sketches in pairs and identify which one communicates the design idea more effectively and why. Invite 3-4 pairs to share their observations, emphasising the importance of detailed annotations, dimensions, materials, and multiple views. Recap Session 1 learning: basic sketching techniques, annotation methods, and the purpose of detailed design communication. Explain that today's lesson will focus on applying these skills to create complete detailed design sketches for a specific product.	Sample design sketches (detailed and basic) Whiteboard and markers Chart showing annotation examples
PHASE 2: NEW LEARNING 40 mins	Present a design brief: 'Design a portable study lamp for JHS students that can be used during power outages.' Display the brief on the board. Guide learners through the design communication process: identifying key features to communicate (light source, power supply, portability, stability), selecting appropriate views (front, side, top), and planning annotations. Demonstrate on the board how to create a detailed sketch with: multiple views of the study lamp, dimension lines and measurements, material specifications (e.g., plastic casing, LED bulb), assembly notes, and functional annotations. Organise learners into groups of 6 (7 groups total) and distribute sketch pads and pencils to each group. Assign each group to develop detailed design sketches for the portable study lamp, ensuring they include: at least two different views, clear annotations indicating materials, dimensions and measurements, notes on how parts connect, and labels for all major components. Circulate among groups providing guidance on sketching techniques, proportion, annotation placement, and clarity of communication. After 20 minutes, ask each group to display their sketches and select a spokesperson to explain their design communication approach. Facilitate a gallery walk where groups observe other designs and provide constructive feedback using sticky notes on: clarity of	Design brief cards Sketch pads (42) Pencils and erasers Rulers and set squares Sample study lamp or images Sticky notes for feedback Display board for gallery walk

	annotations, completeness of views, and effectiveness of communication. Lead a class discussion on common challenges faced and effective strategies for detailed design communication, highlighting examples of excellent annotation and clear sketching from the groups' work. Summarise key principles: detailed sketches must include multiple views, precise annotations, material specifications, dimensions, and assembly notes to effectively communicate design ideas to manufacturers or clients.	
	Assessment 1. Examine a detailed design sketch and identify three types of information that should be included in the annotations to effectively communicate the design. 2. Explain why multiple views (such as front, side, and top views) are necessary when communicating a design idea through sketches. 3. You have created a sketch of a school bag design. List four specific annotations you would add to help a manufacturer understand how to produce your design.	
PHASE 3: REFLECTION 10 mins	Ask learners to reflect individually: 'What was the most challenging aspect of creating detailed design sketches today, and how did you overcome it?' Invite 5-6 volunteers to share their reflections with the class. Pose the question: 'How would your design communication change if you were presenting to a client versus presenting to a manufacturer?' Discuss responses briefly. Summarise the week's learning on communicating design with detail, emphasising that effective design communication requires both artistic skill and technical precision. Preview next week's topic: 'Next week, we will learn how to write design briefs from observed problem situations in our community, which will help us identify real needs that our designs can address.'	Learners' completed sketches Reflection prompt on board
